P/N: DCMS1006

## rosco D•CAMS™ Digital camera & monitoring system

Offering better visibility around the vehicle, the Rosco D•CAMS has been engineered to replace exterior rear-vision mirrors on commercial vehicles. The digital cameras capture the views shown in both the flat lens and convex lens of rear-view mirrors.

Rosco D•CAMS system has been granted an exemption by the FMCSA effective December 4, 2022 ending December 4, 2027.\*

### Features

2 or 3 cameras integrated in one housing on each side of the vehicle.

All cameras are heated.

Cameras cover FOV requirements of Class II, Class IV, and Class V (optional).

- The top camera that replaces the flat mirror lens covers the Class II FOV area.
- The lower/middle camera that replaces the convex mirror lens covers the Class IV FOV area.
- The third camera is downward facing for an extra (optional) view that covers the Class V FOV area.

Functionality icons on screen at all times, lighting up when specific function is active.

Universal mounting kit available. P/N: DCMS3008

### Benefits

- ✓ Wider and deeper Field-of-View (FOV).
- ✓ Smaller blind zones.
- ✓ Better visibility and brighter images during the day and night.
- ✓ Clearer images in all weather conditions.
- ✓ Aerodynamic design offers fuel savings and efficient operations.
- ✓ Small camera profiles and high mounting locations to reduce risks of impacts with objects.
- ✓ Zero frost on the lenses in cold temperatures.
- ✓ Built-in redundancy ensures seamless, uninterrupted viewing with both cameras taking up the full monitor when necessary.

## Clearer views in all conditions

In low light conditions, the traditional mirrors may not offer the best views around a vehicle. The Rosco D•CAMS system offers unparalleled views at night since it does not rely on an exterior light source for visibility.

## Low light conditions

The images on the left show a comparison of standard rearview mirrors to the D•CAMS monitors in low light conditions on both the driver's side and door side of the vehicle.

The mirror reflections are difficult to see in the darkness, but the monitor views are clear and easy to see.

## Inclement weather

When it is raining or snowing, visibility of the traditional rear view mirror may be difficult due to droplets and/or debris on the window and mirror glass.

D•CAMS offers clear views and images during all weather conditions. The exterior cameras are equipped with heaters to ensure there is no frost on the lenses in cold temperatures.

\* Rosco Vision, applied for an exemption from 49 CFR 393.80(a) to allow its CV Digital CMS, named DCAMS (Digital Camera and Monitor System) to be installed as an alternative to automotive rear-vision mirrors through Docket No. FMCSA-2021-0186. FMCSA has reviewed the Rosco CV Digital CMS submission and believes that the Rosco DCAMS system is likely to achieve a level of safety equivalent to or greater than the level of safety than standard rear-view mirrors. The exemption is applicable December 4, 2022 and ending December 4, 2027.
